(54) Title: APPARATUS FOR DIFFUSION OF VOLATILE LIQUIDS

(57) Abstract: An apparatus adapted to disseminate volatile liquid into an atmosphere from a reservoir, the transfer to atmosphere being achieved by means of a porous transfer member that transfers liquid from the reservoir to an evaporation surface. The evaporation surface is a capillary sheet substantially transversely from the transfer member, and being further characterized in that the material of the sheet is a plastics material having a Shore D hardness of from around 50 to 80 and a thickness of from 0.75 - 1.25 mm. These sheets make especially good liquid transfer contact with the transfer member.
